Digital Literacy Project Report

Name: Tanmay Swain
Registration Number: 25BAI1062
Branch: B.Tech CSE-AIML
Year: Fresher
Course Code: CSE0001
Course Title: Digital Literacy
University-VIT Bhopal
Date: 31-03-26

Introduction

This project focuses on developing digital literacy and building a professional online presence. In today's digital world, it is important for students to understand how to use technology effectively, communicate professionally, and stay safe online. Through this project, I worked on creating an infographic, setting up professional profiles, understanding communication etiquette, and learning about cybercrime awareness. Each task helped in improving both technical and practical skills required for academic and professional growth. The project also emphasized the importance of responsible digital behaviour and how it can impact future opportunities. Overall, this project provided a comprehensive understanding of essential digital skills needed in modern education and careers.

Task 1-INFOGRAPHIC

For Task 1, I created an infographic using Canva. The infographic covered topics such as digital literacy, useful digital tools for students, safe internet practices, email etiquette, and professional online presence. The aim was to present important information in a clear and visually appealing way. I used simple language, icons, and structured sections to make the content easy to understand. Canva was helpful because it provided templates and design elements that made the process efficient.

One challenge I faced was arranging all the information neatly without making the design look crowded. It required careful selection of content and proper spacing. I learned that visual presentation is important for effective communication. This task helped me improve both my creativity and understanding of digital awareness. It also showed how information can be simplified and presented in an engaging way.

Task 2-DIGITAL PORTFOLIO

In Task 2, I created my digital portfolio using platforms like GitHub, LinkedIn, and Kaggle. GitHub is used for managing and showcasing coding projects, and I created a profile README to introduce myself and my learning goals. LinkedIn is a professional networking platform where I added my education details and created a professional profile. Kaggle is used for data science and machine learning practice, where I set up my profile to explore datasets and competitions.

These platforms are important for building a professional identity and improving career opportunities. Over the next four years, I plan to regularly update my GitHub with projects, build connections on LinkedIn, and practice data science on Kaggle. This will help me gain practical knowledge and prepare for internships and job opportunities. This task helped me understand the importance of maintaining an online professional presence.

Task 3-PLATFORMS

In Task 3, I explored and practiced using different digital platforms such as GitHub, CodeChef, and Google Forms. GitHub was used to manage and organize my project files, where I learned how to upload files, create folders, and maintain a structured repository. CodeChef helped me practice coding and improve my problem-solving skills by working on programming questions. Google Forms was used to understand how digital tools can be applied for surveys and data collection related to digital literacy.

Through this task, I understood how different platforms serve different purposes in the digital ecosystem. It also helped me improve my technical skills and become more comfortable using online tools for learning and collaboration. One key learning was the importance of organization and clarity while working on digital platforms. Overall, this task helped me gain practical experience and confidence in using digital tools effectively.

Task 4-EMAIL ETIQUETTE

In Task 4, I learned about professional communication and email etiquette. I wrote two formal emails, one requesting an assignment extension and another applying for an internship. This helped me understand how to write clear subject lines, use polite language, and structure emails properly. I also created a checklist of social media dos and don’ts, which emphasized responsible online behaviour.

This task showed how important communication is in both academic and professional settings. Poor communication can create misunderstandings and negative impressions. I learned that being respectful, clear, and professional is essential while communicating online.

Task 5-CYBERCRIME AWARENESS

While researching cybercrime, I was surprised to learn how easily people can be tricked through simple methods like fake calls and payment requests. Many cybercrimes do not require advanced hacking skills but depend on lack of awareness. I realized that even students can become targets if they are not careful.

One habit I will change is being more cautious while making online transactions. I will verify all payment requests and avoid clicking on unknown links. This awareness will help me stay safe and also guide others in avoiding such cyber threats.

Conclusion

This project helped me understand the importance of digital literacy, professional communication, and online safety. I learned how to use digital tools effectively, build a professional online presence, and avoid cyber risks. Each task contributed to improving my technical, communication, and awareness skills. These learnings will be useful in my academic journey and future career.
